Global Logistics & Distribution Management

Why study Global Logistics?

Logistics is key to the profitability of every organization in every industry across the world. It involves “getting the right product, in the right quantity, in the right condition, delivered to the right customer at the right place, at the right time, at the right cost.” (Council of Supply Chain Management Professionals). The continued growth of globalization and increased use of tracking technology have provided new employment opportunities.

Degree and Certificate Offerings

Both U.S. News & World Report and CNN Money rank global logistics as a hot and promising profession. The supply chain industry is one of the fastest growing industries globally and is the second largest employment sector in the United States. What started out as a specialty within business administration, has become an independent discipline with opportunities at every level. And, with the recent addition of the Charlotte Regional Intermodal Facility, job prospects are expected to continue well into 2030.

• Coming in fall 2015
• Associate Degree in Global Logistics and Distribution Management
• Supply Chain Management Certificate
• 80,000 logistics jobs in the Charlotte region (North Carolina Center for Global Logistics)
• Potential salaries with an A.A.S. degree range from $36,000 - $70,000 (Charlotte Works)
